A gardener's inspiration and motivation for gardening can vary, but most of the time, gardening is a hobby done either

as a recreational form of natural art, or as an experiment in self-sufficiency. And with so many plant varieties available ranging from flowers to vegetables, it would be quite rare to find two identical gardens. Most gardening takes place in regions with temperate weather, and each season bears the potential for new beauty. Planting can take place anywhere from early spring through mid-autumn depending on the location, climate, and plant. This book is written to bring your gardening success and the inimitable pleasure that comes from it. It's no fun if all your efforts end up in the compost pile. This book will help you achieve your dream of having a well-maintained and well-groomed lawn using some secrets and tricks that most professional landscapers use. Once you have learned all these techniques, you'll be amazed on how you can achieve and transform your ordinary lawn to a beautiful and well-maintained one.
